

Electrical Products

Viscount Rotational Mouldings Pty Ltd have been supplying the electrical services industry with mouldings for above and below ground applications for over 18 years. The extensive range includes the smaller P1 to P4 pits, round service pits including lids, above ground flame retardant pillars and bases, cable entry ducts and cable guards. The security, corrosion resistance and strength of these robust mouldings ensure the service life expected from the power industry.

Electrical Products

The electrical cable guards are designed to protect external conduits mounted on both timber and concrete poles from impact and vandalism. These cable guards are now available in two sizes and are moulded in UV stabilized polyethylene. The contoured profile allows the cable guard to sit neatly against the pole and is secured by either screws or metal strapping. Designed to be overlapped, these 1.5 metre sections can be buried or left exposed to the toughest Australian conditions.

UG2029 - URDIC65 Pillar

UG2028 - URDIB65 Base

UG2020 - LV Service Pillar

Code	Product	A	A1	B	B1	C	C1
