

# Water Products

Viscount Rotational Mouldings over the years have developed an extensive range of pits suitable for the housing of control valve and meters. From the two legged round pit, water hydrant pit, rural water air valve pit, to the combined collared hydrant pit, Viscount offer the highest quality in underground products. The strong reinforced dual skin lids are available in both the standard and snap lock varieties including embossed names such as Hydrant, Air Valve, Valve and Sewer. The lids are also available in a wide range of colours that can assist in identifying the purpose of the equipment housed. The UV Stabilised polyethylene flushing meter box comes with a security lid.

# Water Products

The rotationally moulded lid offers an anti-slip surface embossed with the word 'Water' or 'Sewer' and is secured with the use of a single corrosion resistant, bolt. Viscount's G3 pit along with being in our Gas Product range, has now successfully been used in Grey Water Systems for larger hydrant installations. This highlights the flexibility of product application that applies to all infrastructure products and our ability to adapt to future demands.
